frame object

frame object

document object

## The Document Object Model

A Web page is a document. Applying JavaScript processing to the XHTML elements on that page. We have considered XHTML tags simply as markup codes providing structure to page content and supplying mechanisms through which styling is applied to that content. Importantly, though, XHTML tags are also software objects. That is, all XHTML tags have properties and methods that can be programmed. As is the case with all software objects, properties refer to characteristics of the element; methods refer to actions the object can perform. XHTML tags, then, are programmable through JavaScript processing routines that set their properties and activate their methods in order to make Web pages dynamic.

# Document

- ☐ The document object represents the entire HTML document and can be used to access all elements in a page.
- ☐ A page is what appears within the browser window.
- ☐ So, every window is associated with a document object.
- ☐ Document Object has its own set of Properties, Collections, Methods & Event handlers.

# Document(Cont.)

## □ Properties:

| Property          | Description  |
|-------------------|--|
| <b>bgColor</b>    | A string that specifies the background color.                                |
| <b>fgColor</b>    | A string that specifies the text color.                                      |
| <b>linkColor</b>  | The color of text for a link that the user has not yet visited (read/write). |
| <b>vlinkColor</b> | The color of text for a link that the user has already visited (read/write). |
| <b>alinkColor</b> | The color of text for a link that the user clicks (read/write).              |
| <b>title</b>      | A string that specifies the contents of the TITLE tag.                       |

# Document(Cont.)

## □ Methods:

| Method           | Description   |
|------------------|---|
| <b>write()</b>   | Writes one or more HTML expressions to a document in the specified window.  |
| <b>writeln()</b> | Writes one or more HTML expressions to a document in the specified window and follows them with a new line character. |

# Document(Cont.)

## □ Methods:

- for accessing document elements.

| Method  | Description   |
|---|---|
| <b>getElementById("ID")</b>                         | For accessing any element on the page via its ID attribute    |
| <b>getElementsByName("NAME")</b>                    | Returns a collection of objects with the specified name       |
| <b>getElementsByTagName("TAGNAME")</b>              | Returns a collection of objects with the specified tag name   |
| <b>document.getElementsByClassName("ClassName")</b> | Returns a collection of objects with the specified class name |

# Document(Cont.)

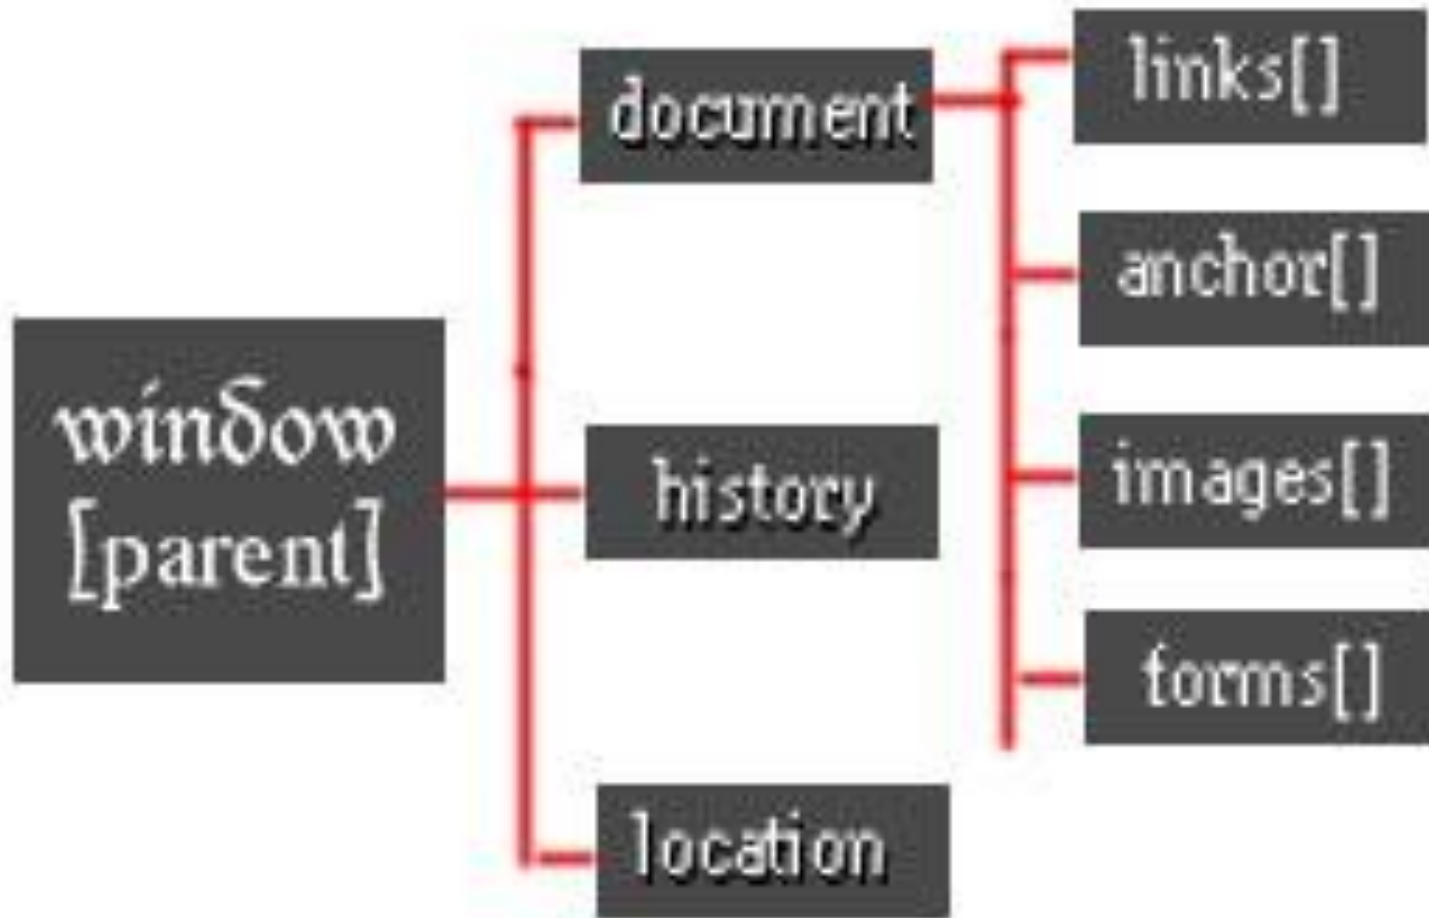

## □ Methods:

- for accessing document elements.

| Method                                     | Description   |
|--|---|
| <b>document.querySelector(css rule)</b>    | Returns the <b>first element</b> that matches a specified CSS selector(s) in the document.                  |
| <b>document.querySelectorAll(css rule)</b> | Returns a NodeList containing <b>all elements</b> that matches a specified CSS selector(s) in the document. |

# Document(Cont.)

# Document(Cont.)

## ❑ Collections :

| Collection     | Description   |
|----------------|---|
| <b>forms</b>   | An array containing an entry for each form in the document    |
| <b>images</b>  | An array containing an entry for each image in the document   |
| <b>anchors</b> | An array containing an entry for each anchor in the document. |
| <b>links</b>   | An array containing an entry for each link in the document.   |

# Document(Cont.)

## ❑ Event Handler:

|             |
|-------------|
| onClick     |
| onDblClick  |
| onKeyDown   |
| onKeyPress  |
| onKeyUp     |
| onMouseDown |
| onMouseUp   |

# Image

- ❑ The Image object is an image on an HTML form, created by using the HTML 'IMG' tag.
- ❑ Any images created in a document are then stored in an array in the **document.images** property.
- ❑ Image Object has its own set of Properties, Collections, Methods & Event handlers.

# Image(Cont.)

## ❑ Object Model Reference:

```
[window.]document.imageName  
[window.]document.imageID  
[window.]document.images[i]  
[window.]document.images["ImgID"]  
[window.]document.getElementById("ImageID")
```

```
document.img1.  
src="img1.jpg"  
document.image  
s[0].src="img1.j  
pg"
```

```
document.img2.s  
rc="img2.jpg"  
document.image  
s[1].src="img2.jp  
g"
```

```
<html>  
  <body>  
    ....  
      
      
    ...  
  </body>  
</html>
```

A diagram showing the mapping between JavaScript code and HTML code. Two red arrows originate from the JavaScript code blocks on the left. The first arrow points from the first JavaScript block to the first <img> tag in the HTML code. The second arrow points from the second JavaScript block to the second <img> tag in the HTML code.

# Image(Cont.)

## ❑ Properties:

|      |    |     |        |       |
|------|----|-----|--------|-------|
| name | id | src | height | width |
|------|----|-----|--------|-------|

## ❑ Event handlers

|            |             |             |         |            |
|------------|-------------|-------------|---------|------------|
| onmouseout | onmouseover | onmousemove | onclick | ondblclick |
|------------|-------------|-------------|---------|------------|

# Form

- ❑ By using the form you have at your disposal information about the elements in a form and their values.
- ❑ A separate instance of the form object is created for each form in a document.
- ❑ Objects within a form can be referred to by a numeric index or be referred to by name.
- ❑ Object Model Reference:

```
[window.]document.formname  
[window.]document.forms[i]  
[window.]document.forms["formNAME"]  
[window.]document.forms["formID"]
```

# Form(Cont.)

## □ HTML:

<FORM>

Properties

[NAME="formName"]  
[TARGET="frameName or windowName"]  
[onSubmit="handlerText Or Function"]  
[onReset="handlerText Or Function"]>

Events

</FORM>

# Form(Cont.)

## □ Properties:

| Property          | Description  |
|-------------------|--|
| <b>elements[]</b> | An array containing all of the elements of the form. Use it to loop through form easily. |
| <b>length</b>     | The number of elements in the form.  |
| <b>name</b>       | The name of the form.  |
| <b>id</b>         | The id of the form.  |
| <b>target</b>     | The name of the target window form is to be submitted to.                                |

# Form(Cont.)

## ❑ Methods :

| Method          | Description   |
|-----------------|---|
| <b>reset()</b>  | Resets the form.<br>Clicking the reset button clears all contents that the user has made.   |
| <b>submit()</b> | Submits a form.<br>Clicking the submit button submits the content of the form to the server |

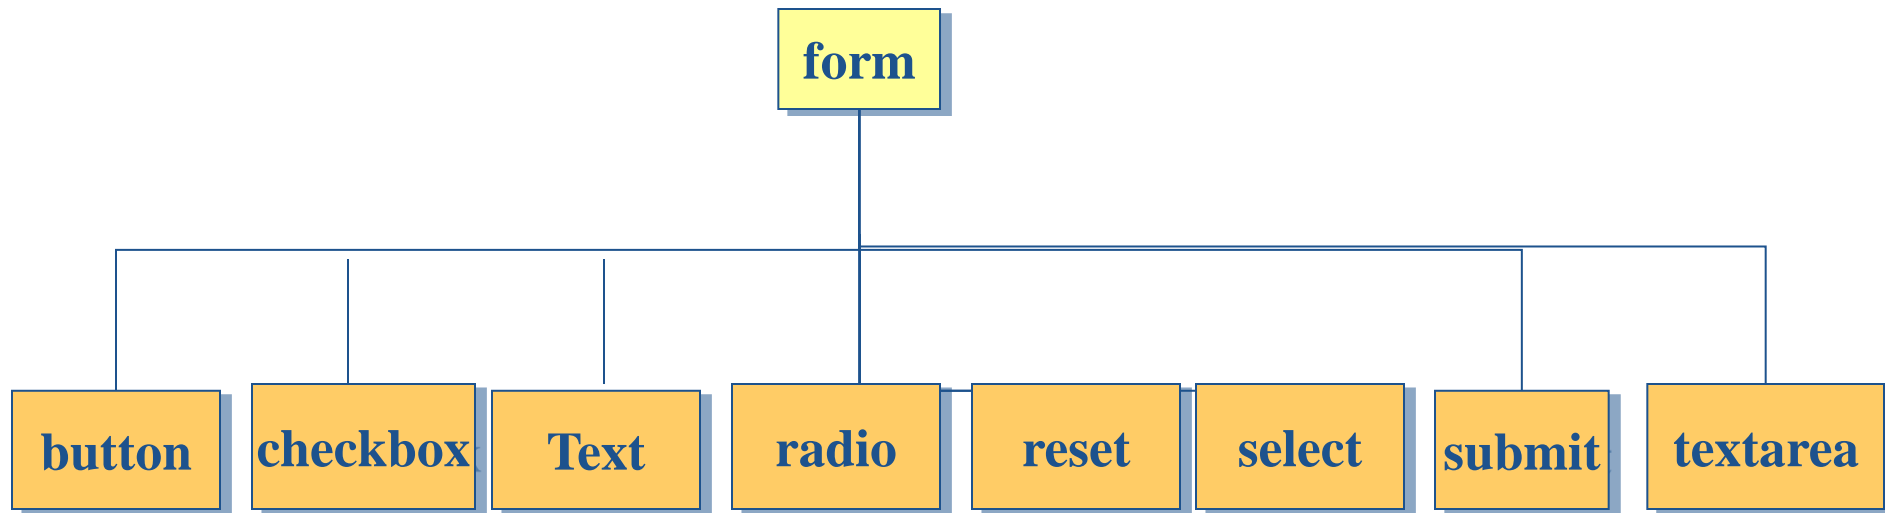

# Form(Cont.)

## ❑ Event handlers:

| Event           | Description  |
|-----------------|--|
| <b>onReset</b>  | Code is executed when the form is reset<br>(by clicking on "reset" button) |
| <b>onSubmit</b> | Code is executed when form is submitted                                    |

# Form(Cont.)

## □ HTML:

```
<input type="text"  
      id="id"  
      value="string"  
      maxlength="n"  
      size="x"  
>
```

# Text (Cont.)

## □ Properties:

| properties      | Description   |
|-----------------|---|
| <b>value</b>    | Sets or returns the value of the value attribute of a text field. |
| <b>readOnly</b> | Sets or returns whether or not a text field should be read-only.  |
| <b>disabled</b> | Sets or returns whether or not a text field should be disabled    |

# Text (Cont.)

## □ Methods

| Method          | Description   |
|-----------------|---|
| <b>blur()</b>   | Removes focus from the field.                                 |
| <b>focus()</b>  | Assigns focus to the field; places the cursor in the control. |
| <b>select()</b> | Selects, or highlights, the content of the control.           |

# Text (Cont.)

## ❑ Event Handlers:

| Event Handler   | Description  |
|-----------------|--|
| <b>onfocus</b>  | The field gains focus when the user tabs into or clicks inside the control.  |
| <b>onblur</b>   | The field loses focus when the user tabs from or clicks outside the control. |
| <b>Onchange</b> | The field loses focus after the contents of the control have changed.        |

# Drop down list

## □ HTML:

```
<select id="id" multiple size="n">  
    <option value="string" selected >  
        label  
    </option>  
    ...  
</select>
```

# Drop down list(Cont.)

## ❑ Properties for Select:

| Property             | Description   |
|----------------------|---|
| <b>length</b>        | The number of options in the list.  |
| <b>selectedIndex</b> | The index number, beginning with 0, of the selected option.   |
| <b>options[]</b>     | An array of the options in the list. Used to reference properties associated with the options; e.g., options[1].value or options[2].text. |
| <b>value</b>         | Sets or returns the value of the selected option in a drop-down list.   |
| <b>text</b>          | The text label associated with an option.   |
| <b>multiple</b>      | Sets or returns whether or not multiple items can be selected   |

❑ [https://www.w3schools.com/jsref/dom\\_obj\\_select.asp](https://www.w3schools.com/jsref/dom_obj_select.asp)

❑ [https://www.w3schools.com/jsref/coll\\_select\\_options.asp](https://www.w3schools.com/jsref/coll_select_options.asp)

# Drop down list(Cont.)

## ❑ Properties for Option:

| Property        | Description   |
|-----------------|---|
| <b>selected</b> | A true or false value indicating whether an option is chosen.       |
| <b>value</b>    | The value associated with an option.                                |
| <b>text</b>     | The text label associated with an option.                           |
| <b>index</b>    | Sets or returns the index position of an option in a drop-down list |

# Drop Down(Cont.)

## □ Methods

| Method          | Description   |
|-----------------|---|
| <b>add()</b>    | Adds an option to a dropdown list                             |
| <b>remove()</b> | Removes an option from a dropdown list                        |
| <b>focus()</b>  | Assigns focus to the field; places the cursor in the control. |
| <b>blur()</b>   | Removes focus from a dropdown list                            |

# Drop down list(Cont.)

## ❑ Event Handlers:

| Event Handler   | Description  |
|-----------------|--|
| <b>onfocus</b>  | The control gains focus.                                       |
| <b>onblur</b>   | The control loses focus.                                       |
| <b>onchange</b> | A different option from the one currently displayed is chosen. |

# Radio button

## □ HTML:

```
<input type="radio"  
      id="id"  
      name="name"  
      value="string"  
      checked  
/>
```

# Radio button(Cont.)

## ☐ Properties

| Properties     | Description  |
|----------------|--|
| <b>length</b>  | The number of radio buttons with the same name.                      |
| <b>checked</b> | A true or false value indicating whether a button is checked.        |
| <b>value</b>   | Sets or returns the value of the value attribute of the radio button |

# Radio button(Cont.)

## ☐ Methods:

| Method         | Description   |
|----------------|---|
| <b>blur()</b>  | Removes focus from the field.                                 |
| <b>focus()</b> | Assigns focus to the field; places the cursor in the control. |
| <b>click()</b> | Simulates a mouse-click on a radio button                     |

# Radio button(Cont.)

## ❑ Event Handlers:

| Event Handler  | Description              |
|----------------|--------------------------|
| <b>onfocus</b> | The control gains focus. |
| <b>onblur</b>  | The control loses focus. |
| <b>onclick</b> | The button is clicked.   |

# Check Box

## ❑ HTML:

```
<input type="checkbox"  
      id="id"  
      name="name"  
      value="string"  
      checked  
/>
```

# Check Box(Cont.)

## ☐ Properties:

| Property       | Description   |
|----------------|---|
| <b>checked</b> | A true or false value indicating whether a button is checked.     |
| <b>value</b>   | Sets or returns the value of the value attribute of the check box |

# Check Box(Cont.)

## ☐ Methods:

| Method         | Description   |
|----------------|---|
| <b>blur()</b>  | Removes focus from the field.                                 |
| <b>focus()</b> | Assigns focus to the field; places the cursor in the control. |
| <b>click()</b> | Simulates a mouse-click on a radio button                     |

# Check Box(Cont.)

## ☐ Event Handlers:

| Event Handler  | Description              |
|----------------|--------------------------|
| <b>onfocus</b> | The control gains focus. |
| <b>onblur</b>  | The control loses focus. |
| <b>onclick</b> | The button is clicked.   |

# Button

## □ HTML:

```
<input type="button"  
      id="id"  
      value="string"  
>
```

# Button(Cont.)

## ❑ Methods:

| Method         | Description   |
|----------------|---|
| <b>blur()</b>  | Removes focus from the field.                                 |
| <b>focus()</b> | Assigns focus to the field; places the cursor in the control. |
| <b>click()</b> | Simulates a mouse-click on a button                           |

# Button (Cont.)

## □ Properties:

| properties      | Description  |
|-----------------|--|
| <b>value</b>    | Sets or returns the text that is displayed on the button   |
| <b>disabled</b> | Sets or returns whether or not a button should be disabled |

# Button(Cont.)

## ❑ Event Handlers:

| Event Handler      | Event   |
|--------------------|---|
| <b>onclick</b>     | The mouse is clicked and released with the cursor positioned over the button. |
| <b>ondblclick</b>  | The mouse is double-clicked with the cursor positioned over the button.       |
| <b>onmousedown</b> | The mouse is pressed down with the cursor positioned over the button.         |
| <b>onmouseout</b>  | The mouse cursor is moved off the button.                                     |
| <b>onmouseover</b> | The mouse cursor is moved on top of the button.                               |
| <b>onmouseup</b>   | The mouse button is released with the cursor positioned over the button.      |

# DOM HTML objects reference

## ❑ DOM HTML objects reference

- <http://www.w3schools.com/jsref/default.asp>

# Introducing SPAN & DIV

- ❑ Used to add text or HTML elements to the page without removing the page contents on the run time.

## ❑ HTML:

```
<span id="s1">  
    Hello There!  
</span>
```

```
<div id="d1">  
    Hello There!  
</div>
```

# Introducing SPAN & DIV (Cont.)

## □ Properties (work with content elements):

| properties         | Description  |
|--------------------|--|
| <b>innerText</b>   | Sets or returns the text that the control contains.<br>“innerText is aware of the rendered appearance of text, while textContent is not.”<br><a href="https://developer.mozilla.org/en-US/docs/Web/API/HTMLElement/innerText">https://developer.mozilla.org/en-US/docs/Web/API/HTMLElement/innerText</a> |
| <b>textContent</b> | Sets or returns the text that the control contains, and execute the HTML tags in the text.<br>Differences from innerText:<br><a href="https://developer.mozilla.org/en-US/docs/Web/API/Node/textContent">https://developer.mozilla.org/en-US/docs/Web/API/Node/textContent</a>                           |
| <b>innerHTML</b>   | Sets or returns the HTML text code that the control contains, and execute the HTML tags in the text.   |

# Introducing SPAN & DIV (Cont.)

A circular icon with a blue border containing a white document with the letters 'JS' in purple.

## □ Properties:

```
<script>
```

```
document.getElementById("d1").innerText = "<b>new text</b>";
```

```
///<b>new text</b>
```

```
document.getElementById("d1").textContent = "<b>new text</b>";
```

```
//<b>new text</b>
```

```
document.getElementById("d1").innerHTML = "<b>new text</b>";
```

```
//new text
```

```
</script>
```

# Variety of DOM References

## □ Finding HTML Elements:

- Finding HTML elements by id
- Finding HTML elements by tag name
- Finding HTML elements by class name
- Finding HTML elements by CSS selectors
- Finding HTML elements by HTML object collections

# This object

- ☐ Use **this** keyword to refer to the current object.
- ☐ Self reference to the object is used :

```
<input type="text" onFocus = "this.value='You are in!'" />
```

# This object (Cont.)

- ❑ Passing current Object as a function parameter:

```
function myFunction(myObject)
{
    myObject.value = "In the function!!"
}

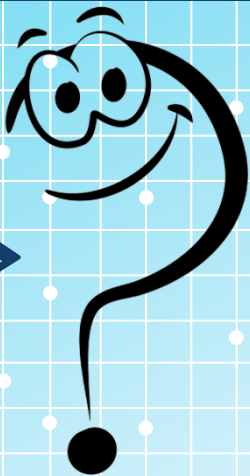

<input type="text" onClick="myFunction(this)"/>
```

<script>

JavaScript

</script>

<SCRIPT>  </SCRIPT>

```
<script>document.writeln("Thank  
You!")</script>
```
